

FREE STANDING ROOF GUARDRAIL SYSTEM

Product Overview

This system has been specifically designed to provide permanent edge protection where regular access for maintenance and inspections is required, without the need to mechanically fix through the roofing membrane or buildings structure. The strength, stability and safety of the system is obtained with a simple cantilever weight. Ezi Klamp Roof Guardrail System is formed using 48mm diameter galvanised steel tube and fittings with stainless steel grub-screws. This ensures a durable, maintenance free finish. Prompt quotations can be supplied from your drawings or quantities.

Advantages

- Complies with the Health & Safety Executives Specialists Inspectors Report No.15 (HSE15: 1988).
- Guardrail height is set at 1100mm with midrail at 550mm.
- Supplied in kit-form with all posts pre-assembled for easy installation.
- Also available as a collapsible version with hinged posts.
- Base plates and counterweights are formed from recycled rubber mouldings so there is no damage to the roof surface.

Application

- Permanent edge protection where regular access for maintenance and inspections on roof buildings is required.
