

KEY CLAMP TUBES & FITTINGS

Product Overview

Our range of key clamp type tube & fittings can be used to form a simple, cost effective handrail system which is easy to assemble. Required to complete the installation is an Allen key or ratchet to tighten the grub screws onto the tube. This system uses galvanised iron pipe clamps and steel tubes. The system comes in a range of diameters and, with over 60 different types of fittings, we have the components to achieve almost any configuration. We hold large stocks of key clamps and tube at our factory in Bristol for prompt nationwide delivery.

Advantages

- No need for bending, threading or welding.
- Simply clamp together with grub screws using just an Allen key.
- Tubes come in standard lengths of 6.4m and 3.2m but they can be cut to length to suit your requirements.

Application

- Carports & Shelters
- Display Stands
- Garment Rails
- Signage
- Storage Racking
- Support Structures
- Exhibition Stands and Traders Stalls
